Modular **Cybersecurity Assessment** as a Baseline Evaluation

for Sustainable Information Security

Many organizations rely on heterogeneous IT environments in which security measures are not applied comprehensively. Limited transparency about risks and responsibilities hinders effective governance of information security.

Systematic assessments deliver clarity, expose gaps, and enhance your security over time.

OUR APPROACH
Individual Cybersecurity Assessment

- Analysis of your current information security level based on relevant standards and frameworks
- Joint definition of the audit scope, objectives, and assessment process
- Audit preparation with targeted building of knowledge for a solid starting point
- Conducting internal audits, on-site or remote
- Systematic evaluation of compliance, deviations, and risks
- Preparation of an audit report with recommended actions

OUTCOME AND CLIENT VALUE
Strategic Recommendations for Action

- Objective overview of the maturity level of your information security
- Report on strengths and weaknesses, clearly documented and evaluated
- Concrete measures to improve your security posture
- Increased transparency and structure in the internal audit process
- Solid preparation for external audits and certifications
- Measurable contribution to the continuous improvement of your security

WHY CONSILEON

Depending on your objectives and maturity level, we offer suitable formats, from compact screenings and security analyses to internal audits for targeted audit preparation. Our services are based on recognized standards and best practices.

Our cybersecurity expert will be happy to advise you.
